Disinfection Service

Family Friendly can disinfect your home and/or workplace by a broad spectrum disinfection fogging, targeting both surfaces and inaccessible areas.

Regular disinfection services should form part of your action plan to prevent the spread of harmful bacteria and viruses.

Our expert selection of broadspectrum disinfectant is designed to disinfect inanimate environmental surfaces such as floors, walls, structures, ventilation and other equipment.

Our broadspectrum disinfection misting service enables us to sanitise large areas in short periods of time, achieving maximum effectiveness and minimal downtime for your business.

Modern Disinfectant

We use a broad-spectrum, non-selective disinfectant with outstanding virucidal properties for a fast kill

Superior Safety

A superior safety profile ensures convenient application for users, safe for all surfaces.

Environmentally Friendly

We have selected a disinfectant that includes ingredients which have been carefully chosen for their ability to degrade naturally within the environment

What should you expect during your service?

- The disinfection application involves the use of an automatic ULV mister designed to disperse the disinfectant in fine micron particles that will appear to hang in the air as they slowly settle onto all surfaces.
- This will result in the surfaces becoming moist for a short period after the treatment. This period is when the disinfectant takes action and the surface must be left to dry.
- Wipe down on frequently touch areas (door knob/handle, hand rails, lift buttons, etc.)
- Access to the treatment areas is prohibited during this process and for approximately 1 hour post completion of application. This may be longer depending on ventilation of the premises.

How should you prepare your site before the service?

- Remove any materials that could be damaged by moisture e.g. paperwork and artwork.
- ALL food items MUST be removed from the area to be treated.
- Food containers and utensils should be placed away in cupboards or drawers.
- All electrical equipment should be covered with plastic (e.g. keyboards, monitors, televisions)
- Any items being covered or removed should be sanitised prior with an alcohol-based wipe or aerosol spray
- Please allow clear access for our technicians and remove any trip hazards.
- If your site has fish tanks, aquariums or ponds please ask us for additional guidance on these.
- Ensure all smoke detectors and air conditioning systems are turned off prior to and after formulation dispersal (including “No Entry” period).

DO NOT ENTER

UNDER ANY CIRCUMSTANCES

This area has been disinfected with
a registered airborne liquid

**RE-ENTRY IS ONLY PERMITTED AFTER
THE STATED TIME BELOW**

Time Re-Entry Permitted: _____ AM/PM

Technician Name: _____

Technician Phone: _____

*If you require any information or advice regarding the
treatment or accessing the site prior to the re-entry time
please contact the technician on the phone number written*

Will you need to do anything after your service?

Apart from enjoying peace of mind for you and your family and/or team, the following quick housekeeping tips should be noted for continued success between disinfection services

- **If there is any moisture remaining upon re-entry to your office/workplace it should be dried with paper towels and disposed of. Direct contact with hands or other parts of their bodies should be avoided**
- **Rinse any food/drinking containers before use if they were left in an exposed location.**
- **Ensure any new materials brought back into the area are sanitised appropriately**
- **Remove any plastic wrapping on electrical equipment (keyboard, monitors, televisions) and dispose.**
- **Regular disinfection services should form part of your action plan to prevent the spread of harmful bacteria and viruses.**
